

WaterSteward

proactive wastewater maintenance

- *On-site wastewater systems are the most expensive system in most homes. They treat hundreds of gallons of wastewater re-charging into the groundwater daily.*
- *Increased environmental awareness, as well as industry maturity, has resulted in increased system complexity requiring increased maintenance*
- *The traditional paradigm for system maintenance is pumping the septic tank, which only addresses 1 part of the system. Pumping frequency varies greatly from house to house.*
- *WaterSteward is the new paradigm:*
 - *proactive, whole system maintenance*
 - *high owner value*
 - *optimum system performance*
 - *proper effluent treatment which promotes clean water*

What the program includes: When you enroll in WaterSteward , your on-site wastewater system will be inspected once per year. Yearly inspections will include:

- *the condition of the septic/aeration tank*
- *solids levels: does it need to be pumped?*
- *cleaning of effluent filters*
- *dosing tanks & components, including alarms*
- *the liquid level in the absorption system*
- *manufacturer recommended maintenance*
- *reporting for your records*
- *recommendations of needed pumping, repairs, etc.*
